

921

```
class Solution(object):  
    def minAddToMakeValid(self, S):
```

```
        """  
        :type S: str  
        :rtype: int  
        """
```

```
        l = 0
```

```
        r = 0
```

```
        for i in S:
```

```
            if i == "(":
```

```
                l += 1
```

```
            elif i == ")":
```

```
                l -= 1
```

```
            if l < 0:
```

```
                r += 1
```

```
                l = 0
```

```
        return l + r
```

→ 合并行 l, r = 0, 0

} ⇒ 都对 l 操作可以放一行

l += 1 if l == '(' else (-1 if l == ')' else 0)

赋值写一起。

r, l = r+1, 0

代码可以简短很多
